

Alumni Mentorship & Mock Interview Platform (Problem Statement #06)

Deliverable 1: Complete Requirements Specification Table (5 Functional & 2 Non-Functional Requirements)

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (Justification)	Comments
FR-001	Functional	The system shall recommend alumni mentors to students based on domain matching (e.g., Embedded Systems, Cloud Computing, AI/ML) and facilitate one-click session booking.	High	Pass: Mentorship session added to both calendars with meeting link. Fail: Double-booking of mentor slots or unmatched domain listings.	Core discovery and booking mechanism connecting students with relevant alumni expertise seamlessly.	Base requirement from problem statement specification.
FR-002	Functional	The system shall allow Alumni Mentors to manage their profile, define interview domain specializations, and configure recurring/ad-hoc availability calendar slots.	High	Pass: Available slots publish dynamically to student catalog; sync in < 5s. Fail: Overlapping slot creation or unverified mentor profiles enabled.	Gives mentors full autonomy over their time commitments and domain specializations.	Includes time-zone normalization and buffer management.
FR-003	Functional	The system shall provide Alumni Mentors with a structured rubric scorecard interface to submit quantitative ratings (technical, communication, problem solving) and qualitative feedback post-session.	High	Pass: Scorecard submitted and instantly visible in student dashboard; notification dispatched. Fail: Incomplete mandatory rubric fields submitted.	Standardizes evaluation criteria, providing students with actionable, objective interview feedback.	Requires ratings on 1-5 scale across defined competencies.
FR-004	Functional	The system shall allow Student Mentees to upload and attach resumes/portfolios and specific interview focus topics during session booking for mentor pre-review.	Medium	Pass: Supported formats (PDF/DOCX ≤ 5MB) securely attached and accessible to mentor prior to call. Fail: Corrupted files or unauthorized file access.	Enables mentors to review background details prior to the mock interview for targeted, realistic questions.	Automated anti-malware scanning upon file upload.
FR-005	Functional	The system shall track mentorship analytics, generate student performance growth reports across multiple mock interviews, and award alumni engagement badges.	Medium	Pass: Trend chart generated with historical rubric averages; badges visible on profile. Fail: Data discrepancy in aggregated session scores.	Encourages continuous student improvement and incentivizes sustained alumni participation.	Supports PDF progress report export.
NFR-001	Non-Functional (Privacy & Security)	All user profile data, resumes, and feedback scorecards shall adhere to privacy guidelines and support soft-deletion within 24 hours of request.	High	Pass: Data anonymization/soft deletion completed within 24 hours with audit log confirmation. Fail: Retained PII or active profile data post 24-hour window.	Protects sensitive student evaluations, resumes, and alumni personal contact information.	Complies with institutional student data privacy regulations.
NFR-002	Non-Functional (Reliability & Perf.)	The session scheduling and automated calendar sync service shall maintain 99.9% uptime and prevent concurrent double-booking with under 200ms transaction lock latency.	High	Pass: 100% of concurrent booking collisions rejected; meeting link generation latency < 2s. Fail: Double-booking occurrence or calendar sync timeout.	Prevents scheduling conflicts and ensures reliable mentor-mentee interview appointments.	Tested with simulated concurrent booking attempts.
