

Alumni Mentorship & Mock Interview Platform (Problem Statement #06)

Deliverable 3: Use-Case Flow Specification (1-Page Core Specification)

Use Case ID	UC-01	Use Case Name	Book Mock Interview Session
Primary Actor	Student Mentee	Secondary Actor	Alumni Mentor, Calendar & Meeting Service
Priority	High	Trigger	Student selects an available mentor calendar slot and books session
Description	Allows a student to browse verified alumni mentors by technical domain, select an available calendar slot, provide interview goals, and confirm a scheduled mock interview session.		
Preconditions	1. Student Mentee is authenticated with university credentials. 2. Alumni Mentor has an active profile with published future availability slots. 3. Student has not exceeded the maximum active booking quota (max 2 active sessions).		
Postconditions	1. Selected slot is locked and marked 'Booked' in the system. 2. Automated calendar invites with video conference link dispatched to both parties. 3. An immutable audit log and confirmation notification are generated.		

Main Success Scenario (Step-by-Step Flow):

1. **Student Mentee** navigates to the 'Find Alumni Mentors' catalog on the platform.
2. **System** displays searchable catalog of verified alumni mentors filtered by domain expertise (e.g., Cloud, Embedded, AI).
3. **Student Mentee** selects a mentor profile and views their published availability calendar.
4. **Student Mentee** chooses an available date and 45-minute time slot.
5. **Student Mentee** enters interview focus areas and clicks 'Confirm Booking'.
6. **System** invokes «include» **UC-02: Validate Slot & Check Collision** to lock the slot and verify no double-booking collision exists.
7. **System** executes «extend» **UC-03: Attach Resume & Domain Goals** if the student chooses to attach a resume PDF.
8. **System** commits the booking record into the database and marks the mentor slot as reserved.
9. **System** interfaces with the **Calendar & Meeting Service** to generate a secure video meeting URL and syncs calendar invites.
10. **System** displays a confirmation screen with session details, meeting URL, and dispatches confirmation emails.
11. **Use Case ends successfully.**

Alternate Flows & Exception Handling:

4a. Booking Quota Exceeded (Max 2 Active) 4a1. System detects student already has 2 pending active sessions. 4a2. System blocks slot selection with alert: 'Active booking limit reached.' 4a3. Use case terminates.	6a. Concurrent Slot Collision Detected 6a1. UC-02 detects another student booked the same slot milliseconds prior. 6a2. System releases temporary lock: 'Slot already reserved. Please select another.' 6a3. Student picks different open slot (re-enters Step 4).
7a. Invalid File Attachment («extend» UC-03) 7a1. Student uploads resume exceeding 5MB or invalid extension. 7a2. System rejects file: 'Upload valid PDF/DOCX ≤ 5MB.' 7a3. Student re-uploads valid file or proceeds without attachment.	9a. Calendar / Video Service API Timeout 9a1. System experiences timeout contacting external Video API. 9a2. System commits booking and flags 'Meeting Link Pending'. 9a3. Asynchronous retry task dispatches link via email.
