Alumni Mentorship & Mock Interview Platform (Problem Statement #06)

Deliverable 3: Use-Case Flow Specification (1-Page Core Specification)

Use Case: UC-01 - Book a Mock Interview

Primary Actor: Student Mentee

Other Actors: Alumni Mentor, Calendar API

Preconditions:

1. The student is logged in.
2. The mentor has at least one open timeslot on their profile.
3. The student hasn't hit the maximum limit of 2 active bookings.

Postconditions:

1. The timeslot is marked as booked so nobody else can take it.
2. Both the student and mentor get a calendar invite with a video link.

Main Flow:

1. The student goes to the "Find Mentors" page.
2. The system shows a list of available mentors, and the student filters them by subject (like Cloud or AI).
3. The student clicks on a mentor and looks at their calendar.
4. The student picks an open 45-minute slot.
5. The student types in what they want to practice during the interview.
6. The system runs **UC-02 (Check Slot Availability)** to make sure the slot wasn't just taken by someone else.
7. If the student decides to upload a resume, the system runs **UC-03 (Attach Resume)**.
8. The system saves the booking and updates the mentor's calendar.
9. The system calls the Calendar API to get a video meeting link.
10. The student sees a success message and gets a confirmation email.

Alternate Flows:

- **Booking Limit Reached:** If the student already has 2 upcoming interviews, the system stops them from booking another one and shows an error message.
- **Slot Already Taken:** If **UC-02** finds out someone else booked the slot a second ago, it tells the student the slot is gone and asks them to pick another time.

- **Bad Resume Upload:** If the student uploads a file that isn't a PDF or is over 5MB, the system shows an error and asks them to try again.
